

WE FIX CARBON

At Biochar Pamoja, we are revolutionizing biochar production and application with cutting-edge RoCC kiln technology. Our mission is to provide low-cost, sustainable solutions for biochar production, improving soil health, reducing carbon footprints, and creating economic opportunities for communities in Kenya and beyond. Join us in embracing a cleaner, more sustainable way to cook, farm, and sequester carbon.

Featured Projects

Explore some of our recent projects and see how we have helped in biochar production

Bungoma Biochar Farming

Training 200+ farmers in Bungoma to turn crop residues into biochar, boosting maize yields by 20–30% and generating verified carbon credits.

PowerPellet TLUD Cookstoves

Clean cooking stoves that also produce biochar and electricity for lighting and mobile charging, empowering women’s groups in Bungoma.

 Top-lift Updraft technology

Kisii & Nyakach RoCC Kiln Pilots

In collaboration with Kisii University, KMFRI, and the Ahero Irrigation Scheme, Biochar Pamoja test the first RoCC Kilns fabricated in Kenya.

 Retort-Optimized Cone Technology
